

# Protecting Our Parishes, Missions, and Schools

## eye SAFETY

*What would  
you do if you  
lost your  
vision from a  
work-related  
injury?*

*The most common hazards to the eyes and face are:*

- Chemical irritants and corrosives
- Dust and dirt blown around by the wind
- Flying particles from drilling, cutting, digging, and woodworking
- Splashes
- Radiation from welding and electrical work

*Protecting your eyes – control hazards at the source:*

- Utilize protective screen and wire mesh at the source
- Utilize the eye protection shields installed on machines
- Control dust and fumes using general ventilation systems
- Always wear the proper eye protection!

Remember, protect  
your eyes – do *not* risk  
losing your sight!

**Make SAFETY a habit!**
